INDEX

S. No.	Practical / Activity Name	Page No.	Teacher's Signature
1	Create and Manage the Salesman Table in LibreOffice Base	_____	_____
2	Insert Hyperlinks in Microsoft Excel	_____	_____
3	Solar system project report in libre office writer	_____	_____
4	Product Table – LibreOffice Base	_____	_____
5	Compare two financial reports in libre office calc	_____	_____
6	Create a table using design view in libre office base	_____	_____
7	Create a relationship between student and class	_____	_____
8	Calculate and maximize average units sold in libre office calc	_____	_____
9	Create the salesmen table	_____	_____
10	Insert hyperlink in Microsoft excel	_____	_____
11	Goal seek in libre office calc	_____	_____
12	Calculate student marks and subtotals	_____	_____
13	Analyse household expenses	_____	_____
14	Create a cash withdrawal slip tempalate	_____	_____
15	Create a new year greetings template	_____	_____
16	Write about conservation of water and insert a image	_____	_____

17	Create a new paragraph style named “my list”	_____	_____

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my subject teacher for providing me with the opportunity to complete this practical work. Their valuable guidance, support, and encouragement helped me understand the concepts and complete the lab assignments and activities successfully.

I am also thankful to my university for providing the necessary resources and learning environment. This practical work helped me improve my knowledge of LibreOffice Writer, Calc, Base, spreadsheet formulas, database management, and document formatting.

Finally, I would like to thank everyone who supported and guided me throughout the completion of this practical file.

Thank You.

QUES 1: You are compiling the annual report for your school , which include multiple chapters .

Step 1: Create the report structure

1. Open Microsoft Word and create a Blank Document.
2. Type the title: ANNUAL SCHOOL REPORT 2025–2026.
3. Add the following main topics and subtopics:

- Introduction
- Academic Achievements
    - Examination Results
    - Board Results
- Sports Activities
    - Inter-School Competitions
    - Annual Sports Day
- Cultural Activities
    - Annual Function
    - Festivals and Celebrations
- Infrastructure Development
- Conclusion
- Apply Heading 1 style to all main topics.
- Apply Heading 2 style to all subtopics.

Step 2: Insert a Table of Contents (TOC)

1. Place the cursor below the report title.
2. Go to the References tab.
3. Click Table of Contents.
4. Select Automatic Table 1 or Automatic Table 2.

Word will automatically generate the TOC using your heading styles.

Step 3: Apply character styles

1. Select the main topics, such as Academic Achievements and Sports Activities.
2. Go to Home → Styles and apply a suitable heading style.
3. Select the subtopics, such as Examination Results and Annual Sports Day.
4. Apply a different heading style to distinguish them from the main topics.

Step 4: Update the Table of Contents

Whenever you add new sections:

1. Click anywhere inside the Table of Contents.
2. Select Update Table.
3. Choose Update entire table.
4. Click OK.

The new sections and their page numbers will appear in the TOC.

QUES 2: Consolidate Data of Two Sheets in LibreOffice Calc

Step 1: Enter data in Sheet 1

Open LibreOffice Calc and enter the following data in Sheet1.

Name	June Pocket Money
Amit	1200
Sumit	1000
Naina	1500
Suman	1300
Kamal	1400

Step 2: Enter data in Sheet 2

Click the + icon at the bottom to create Sheet2. Enter:

Name	July Pocket Money
Amit	900
Sumit	1100
Naina	1300
Suman	1200
Kamal	1250

Step 3: Create Sheet 3

1. Click the + icon to create Sheet3.
2. Enter the headings:

- A1: Name
- B1: June Pocket Money
- C1: July Pocket Money
- D1: Total Pocket Money

3. Copy the names from Sheet1 into column A of Sheet3.
4. Copy the June amounts into column B.
5. Copy the July amounts into column C.

Step 4: Calculate the total

1. Click cell D2.
2. Enter the formula:

```
=SUM(B2:C2)
```

3. Press Enter.
4. Drag the fill handle from D2 down to D6 to calculate the totals for all students.

Step 5: Final result

Expected output in Sheet3

Name	June	July	Total
Amit	1200	900	2100
Sumit	1000	1100	2100
Naina	1500	1300	2800
Suman	1300	1200	2500
Kamal	1400	1250	2650

Alternative: To use Calc's actual consolidation feature, go to Data → Consolidate, select the source ranges from Sheet1 and Sheet2, choose Sum, and set the destination to Sheet3. If the ranges have matching names, select the appropriate label options.

QUES 3 : Solar System Project Report in LibreOffice Writer .

Aim: To insert, resize, crop, and position images in a document using LibreOffice Writer.

Step 1: Open the document

1. Open LibreOffice Writer.
2. Create a new blank document.
3. Type the heading SOLAR SYSTEM.
4. Make the heading bold, increase its font size, and align it to the centre.

Step 2: Insert three images

You need images of:

- The solar system
- A constellation
- A spacecraft

For each image:

1. Click Insert → Image.
2. Select the required image from your computer.
3. Click Open.

Repeat these steps to insert all three images.

Step 3: Resize the solar system image to half the page width

1. Click the solar system image.
2. Right-click and select Properties.
3. Open the Position and Size section or tab.
4. Keep Keep ratio enabled so the image does not become distorted.
5. Set the width to approximately half the page width. For an A4 page with normal margins, about 8 cm is suitable.
6. Click OK.

Step 4: Crop the constellation image

1. Select the constellation image.
2. Right-click and choose Crop or use the crop tool if available.
3. Drag the crop handles inward to remove unnecessary background.
4. Press Enter or click outside the image to apply the crop.

Step 5: Align the solar system image to the centre

1. Select the solar system image.
2. Right-click and choose Properties.
3. Open the Type/Position settings, if available.
4. Set horizontal alignment to Center relative to the page or text area.

Alternatively, select the image and use the alignment options in the image toolbar.

Step 6: Place the spacecraft image at the top-right with text wrapping

1. Select the spacecraft image.
2. Resize it if necessary.
3. Right-click the image and choose Wrap → Optimal Page Wrap or Wrap → Page Wrap.
4. Drag the image to the top-right corner of the page.
5. Adjust its position so the surrounding text flows around the image.

Step 7: Save the document

1. Click File → Save As.
2. Enter the file name `Solar_System_Project`.
3. Save it in ODT format.

QUES 4: Product Table — LibreOffice Base

Aim: To sort product records, create a wildcard query, generate a report, sort the report, and add page numbers.

Step 1: Create the Product table

1. Open LibreOffice Base.
2. Select Create a new database and click Finish.
3. Save the database as `ProductDB`.
4. Click Tables → Create Table in Design View.
5. Create the following fields:

Field Name	Field Type
ProductID	Integer
ProductName	Text (VARCHAR)
Category	Text (VARCHAR)
Price	Decimal

6. Set `ProductID` as the Primary Key.
7. Save the table with the name `Product`.

Step 2: Enter the records

Open the Product table and enter the following data.

ProductID	ProductName	Category	Price
1	Laptop	Electronics	80000
2	Tablet	Electronics	30000
3	Chair	Furniture	15000
4	Desk	Furniture	25000
5	Smartphone	Electronics	50000

Save the table.

Step 3: Sort the Product table by Price in descending order

1. Open the Product table.
2. Click the Price column heading.
3. Click Sort Descending on the toolbar.

Expected order:

ProductName	Price
Laptop	80000
Smartphone	50000
Tablet	30000
Desk	25000
Chair	15000

Step 4: Create a wildcard query for products starting with T

1. Click Queries → Create Query in Design View.
2. Add the `Product` table.
3. Add the fields `ProductID`, `ProductName`, `Category`, and `Price` to the query grid.
4. Under the `ProductName` field, enter this criterion:

```
LIKE 'T%'
```

5. Run the query using F5.
6. Save the query as `ProductsStartingWithT`.

Expected output:

ProductID	ProductName	Category	Price
2	Tablet	Electronics	30000

Note: In LibreOffice Base's query design, `LIKE 'T%'` is commonly used for SQL queries. If you are using the visual query grid with a different database engine, the wildcard may be `LIKE 'T*'` instead.

Step 5: Generate a report based on the Product table

1. Click Reports in the main database window.
2. Select Use Wizard to Create Report.
3. Choose the `Product` table.
4. Move all fields to the Selected Fields box.
5. Set the report title to `Product Report`.
6. Choose a suitable layout and click Finish.

Step 6: Sort the report in ascending order of ProductID

1. Open the report wizard again, or edit the report's sorting settings.
2. Select `ProductID` as the sorting field.
3. Choose Ascending order.
4. Save the report.

Step 7: Add the page number in the footer

1. Open the report in Edit mode.
2. Enable the Page Footer section if it is not already visible.
3. Click inside the footer.
4. Choose Insert → Field → Page Number.
5. Save the report.

Question 5: Compare Two Financial Reports in LibreOffice Calc

Aim: To identify discrepancies and reconcile differences between two versions of a financial report.

Step 1: Open both spreadsheets

1. Open LibreOffice Calc.
2. Open the first financial report.
3. Open the second financial report in another window or copy its data into a separate sheet in the same workbook.

Rename the sheets `Report1` and `Report2`.

Step 2: Arrange the data

Suppose both reports have the following columns:

A	B
Item	Amount
Sales	50000
Expenses	20000
Profit	30000

Ensure both reports use the same item names and that corresponding records are in the same rows.

Step 3: Create a comparison sheet

1. Add a new sheet and name it `Comparison`.
2. Enter these headings:

A	B	C	D
Item	Report 1	Report 2	Difference
Sales	50000	52000	2000
Expenses	20000	21000	1000
Profit	30000	31000	1000

3. In cell D2, enter:

```
=C2-B2
```

4. Press Enter and drag the formula down for the remaining records.

A positive result means Report 2 has a higher amount; a negative result means it has a lower amount.

Step 4: Identify discrepancies

1. Select the Difference column.
2. Use Format → Conditional → Condition or conditional formatting to highlight cells that are not equal to zero.
3. Review the highlighted amounts and check the original reports.

You can also use this formula in E2 to show the status:

```
=IF(B2=C2;"Match";"Discrepancy")
```

Copy it down the column.

Step 5: Reconcile the differences

1. Verify the original entries and calculations.
2. Correct any errors after confirming the accurate figures.
3. Update the comparison sheet.
4. Confirm that all reconciled records show a difference of zero and a status of `Match`.

Question 6: Create a Table Using Design View in LibreOffice Base

Aim: To create a table, set a primary key, sort records, delete a record, and add a new record.

Step 1: Create a database and table

1. Open LibreOffice Base and create a new database.
2. Click Tables → Create Table in Design View.
3. Enter the following field names and types.

Field Name	Field Type
RollNo	Text (VARCHAR)
Name	Text (VARCHAR)
DateOfBirth	Date
PhoneNo	Text (VARCHAR)
Place	Text (VARCHAR)

4. Right-click the row for `RollNo` and select Primary Key.
5. Save the table as `StudentDetails`.

Step 2: Enter the records

Roll No.	Name	Date of Birth	Phone No.	Place
A001	Manan Gupta	12/09/1987	2354667667	Delhi
A002	Ryansh Sharma	09/05/1986	3435555555	Chhattisgarh
A003	Rahul John	02/05/1990	6565544324	Mumbai

Save the records.

Step 3: Sort Place in descending order

1. Open the `StudentDetails` table.
2. Click the `Place` column heading.
3. Click Sort Descending on the toolbar.

The order will be Mumbai, Delhi, and Chhattisgarh.

Step 4: Set Roll No. as the primary key

If you already set it in Step 1, no further action is needed. Otherwise:

1. Open the table in Design View.
2. Right-click the row selector beside `RollNo`.
3. Select Primary Key.
4. Save the table.

Step 5: Delete record A002

1. Open the table.
2. Select the row containing `A002`.
3. Right-click the row selector and choose Delete Rows.
4. Confirm the deletion.

Step 6: Add another record

Enter a new record, for example:

Roll No.	Name	Date of Birth	Phone No.	Place
A004	Neha Sharma	15/08/1991	9876543210	Gurugram

Save the changes.

Question 7: Create a Relationship Between Students and Classes

Aim: To establish a relationship between two tables and create a query showing each student, their class, and their teacher.

Step 1: Create the Students table

In LibreOffice Base, select Tables → Create Table in Design View and create these fields:

Field Name	Field Type
StudentID	Integer
StudentName	Text (VARCHAR)
DateOfBirth	Date
ClassID	Integer

Set `StudentID` as the primary key.

Enter the following records:

StudentID	StudentName	DateOfBirth	ClassID
1	Priya Sharma	2005-03-15	101
2	Rahul Kapoor	2004-07-22	102
3	Meena Patel	2005-11-10	101
4	Aisha Khan	2004-02-25	103
5	Dev Rai	2005-05-30	102

Save the table as `Students`.

Step 2: Create the Classes table

Create a second table with these fields:

Field Name	Field Type
ClassID	Integer
ClassName	Text (VARCHAR)
TeacherName	Text (VARCHAR)

Set `ClassID` as the primary key.

Enter the following records:

ClassID	ClassName	TeacherName
101	Mathematics	Mr. Prakash
102	Science	Ms. Yashika
103	History	Mrs. Seema

Save the table as `Classes`.

Step 3: Set up the relationship

1. Go to Tools → Relationships.
2. Add the `Students` and `Classes` tables.
3. Drag `ClassID` from the Classes table to `ClassID` in the Students table.
4. Ensure the relationship is one-to-many (one class can have many students).
5. Enable referential integrity if the option is available.
6. Save and close the Relationships window.

Step 4: Create the query

1. Click Queries → Create Query in Design View.
2. Add both `Students` and `Classes`.
3. If the relationship line is not displayed automatically, join the two `ClassID` fields.
4. Add these fields to the query grid:
    - `StudentName` from Students
    - `ClassName` from Classes
    - `TeacherName` from Classes
5. Run the query using F5.
6. Save it as `StudentClassTeacherQuery`.

Final output

Student Name	Class	Teacher
Priya Sharma	Mathematics	Mr. Prakash
Rahul Kapoor	Science	Ms. Yashika
Meena Patel	Mathematics	Mr. Prakash
Aisha Khan	History	Mrs. Seema
Dev Rai	Science	Ms. Yashika

Result: The relationship and query successfully display every student along with their class and teacher.

Question 8: Calculate and Maximise Average Units Sold in LibreOffice Calc

Aim: To calculate the average units sold and use Solver to maximise the average under specified conditions.

Step 1: Enter the spreadsheet data

Open LibreOffice Calc and enter the following data:

Cell	Product	Units Sold
A1/B1	Product / Units Sold	
A2	A	69
A3	B	73
A4	C	88
A5	D	86

In cell A8, type `Average Unit Sold`.

Step 2: Calculate the average in cell B8

1. Click cell B8.
2. Enter the formula:

```
=AVERAGE(B2:B5)
```

3. Press Enter.

The initial average is:

$$\frac{69+73+88+86}{4}=79$$

So, B8 = 79.

Step 3: Open Solver to maximise the average

1. Click Tools → Solver.
2. Set the Target Cell to `$B$8`.
3. Select Maximum if available, or choose a target value of `95` if your Solver dialog supports a value target.
4. Set the By Changing Cells field to `$B$2:$B$5`.

Step 4: Enter the constraints

Add the following conditions in Solver:

Cell	Condition	Value
B2	Less than or equal to	88
B3	Greater than or equal to	82
B4	Less than or equal to	90
B5	Greater than or equal to	60

To add each constraint, use the Add button in the Solver dialog, select the cell, choose the comparison operator, and enter the value.

Step 5: Run Solver

1. Click Solve.
2. Review the result.
3. If Solver finds a feasible solution, select Keep Result.
4. Click OK to retain the updated values.

QUES 9: — Activity 1: Create the Salesman Table

Aim: To create a table named `Salesman` in LibreOffice Base, insert records, modify fields, and sort the records.

Step 1: Create the database

1. Open LibreOffice Base.
2. Select Create a new database and click Finish.
3. Save the database as `SalesmanDB`.
4. Click Tables → Create Table in Design View.

Step 2: Define the fields

Create the following table structure:

Field Name	Data Type
SM_ID	Number (Integer)
SM_Name	Text (35 characters)
Address1	Text (40 characters)
Address2	Text (40 characters)
City	Text (15 characters)
State	Text (15 characters)
PinCode	Number (Integer)
Sell_Amt	Number
Comm	Number
Phone	Number
Gender	Text

Set `SM_ID` as the Primary Key.

Save the table as `Salesman`.

Step 3: Insert the Gender field

If you have already created the table without Gender:

1. Open the table in Design View.
2. Add a new field named `Gender`.
3. Set its data type to Text.

4. Save the table.

To use Male as the default value, open the field properties and enter `Male` in the Default value field.

Step 4: Enter at least 15 records

Enter these sample records. The PIN codes and phone numbers are illustrative.

SM_ID	SM_Name	City	State	PinCode	Sell_Amt	Comm	Gender
1	Amit	Delhi	Delhi	110001	50000	5000	Male
2	Sumit	Mumbai	Maharashtra	400001	60000	6000	Male
3	Neha	Jaipur	Rajasthan	302001	45000	4500	Female
4	Ravi	Lucknow	UP	226001	55000	5500	Male
5	Pooja	Gurugram	Haryana	122001	40000	4000	Female
6	Karan	Chandigarh	Punjab	160001	70000	7000	Male
7	Riya	Bhopal	MP	462001	35000	3500	Female
8	Mohit	Patna	Bihar	800001	48000	4800	Male
9	Anjali	Dehradun	Uttarakhand	248001	52000	5200	Female
10	Rahul	Shimla	HP	171001	65000	6500	Male
11	Priya	Kolkata	WB	700001	42000	4200	Female
12	Aman	Chennai	Tamil Nadu	600001	58000	5800	Male
13	Simran	Pune	Maharashtra	411001	62000	6200	Female
14	Deepak	Hyderabad	Telangana	500001	47000	4700	Male
15	Nisha	Ahmedabad	Gujarat	380001	53000	5300	Female

Fill the `Address1`, `Address2`, and `Phone` fields with suitable sample values as well.

Step 5: Delete records 3 and 6

1. Open the `Salesman` table.
2. Select the row with `SM_ID = 3`.
3. Right-click the row selector and choose Delete Rows.
4. Repeat for `SM_ID = 6`.
5. Confirm the deletion.

Step 6: Change Address1 and Address2 to 50 characters

1. Open `Salesman` in Design View.
2. Select `Address1`.
3. Change its length to `50`.
4. Repeat for `Address2`.
5. Save the table.

Step 7: Sort by SM_Name in ascending order

1. Open the table.
2. Click the `SM_Name` column heading.
3. Click Sort Ascending.

The names will appear from A to Z.

Step 8: Sort by SM_Name in descending order

1. Click the `SM_Name` column heading again.
2. Click Sort Descending.

The names will appear from Z to A.

Result: The Salesman table is created, contains at least 15 sample records initially, and supports field modification, deletion, and sorting. After deleting records 3 and 6, 13 records remain.

QUES 10 — Activity 2: Insert Hyperlinks in Microsoft Excel

Aim: To create hyperlinks to the school library's online catalogue for three book titles.

Step 1: Create the spreadsheet

Open Microsoft Excel and enter:

A: Book Title	B: Online Catalog Link
To Kill a Mockingbird	Link to Catalog
1984	Link to Catalog
The Great Gatsby	Link to Catalog

Step 2: Insert the first hyperlink

1. Select cell B2.
2. Go to Insert → Link (or press `Ctrl + K`).
3. Choose Existing File or Web Page.
4. Enter the actual URL of your school's online catalogue.
5. In Text to display, type `Link to Catalog`.
6. Click OK.

Step 3: Insert the remaining hyperlinks

Repeat the same process for cells B3 and B4, using the same catalogue URL or the appropriate individual book URLs.

For example, if your school provides the catalogue address `https://school.example/catalog`, use the real address supplied by your school instead of this illustrative URL.

Step 4: Test the hyperlinks

1. Click each hyperlink.
2. Check that it opens the intended catalogue page.
3. Save the spreadsheet as `SchoolLibrary.xlsx`.

Result: All three book titles have clickable hyperlinks that direct students to the school's online catalogue.

QUES 11 — Activity 3: Goal Seek in LibreOffice Calc

Aim: To determine how many units of Gadget C must be sold to achieve a monthly revenue of ₹50,000.

The activity gives these values:

- Gadget A sells for ₹100 each.
- Gadget B sells for ₹150 each.
- Gadget C sells for ₹200 each.
- Expected sales: 200 units of A and 150 units of B.
- Target revenue: ₹50,000.

Step 1: Enter the data

Open LibreOffice Calc and enter:

Cell	Product	Selling Price	Units Sold	Revenue
Row 1	Product	Price	Units	Revenue
Row 2	Gadget A	100	200	`=B2*C2`
Row 3	Gadget B	150	150	`=B3*C3`
Row 4	Gadget C	200	0	`=B4*C4`
Row 5	Total Revenue			`=SUM(D2:D4)`

Enter the column headings in A1:D1 and adjust the formulas to match your actual columns. One consistent layout is:

- A = Product
- B = Selling Price
- C = Units Sold
- D = Revenue

With that layout, the exact formulas are:

- D2: `=B2*C2`
- D3: `=B3*C3`
- D4: `=B4*C4`
- D5: `=SUM(D2:D4)`

Step 2: Calculate the current revenue

Gadget A:

$$ 200 \times 100 = ₹20,000 $$

Gadget B:

$$ 150 \times 150 = ₹22,500 $$

Total revenue before Gadget C:

$$ ₹20,000+₹22,500=₹42,500 $$

The remaining revenue required is:

$$ ₹50,000-₹42,500=₹7,500 $$

Step 3: Apply Goal Seek

1. Go to Tools → Goal Seek.
2. Set the Formula cell to `$D$5` (Total Revenue).
3. Set the Target value to `50000`.
4. Set the Variable cell to `$C$4` (Units Sold for Gadget C).
5. Click OK or Solve.
6. Accept the result if prompted.

Step 4: Calculate the answer

The number of Gadget C units needed is:

$$ \frac{7500}{200}=37.5 $$

Therefore, the mathematical answer is 37.5 units of Gadget C.

If the store must sell whole units, it needs to sell 38 units to meet or exceed the target.

- With 37 units, revenue = ₹49,900.
- With 38 units, revenue = ₹50,100.

Result: Goal Seek determines the number of Gadget C units required to reach the target revenue. For whole-unit sales, the minimum is 38 units.

QUES 12 — Activity 4: Calculate Student Marks and Subtotals

Aim: To organise marks for 30 students across five subjects and calculate each student's subtotal.

Step 1: Create the spreadsheet

Open LibreOffice Calc and enter the following headings:

A	B	C	D	E	F	G
Student Name	English	Maths	Science	Computer	Hindi	Total

Enter the names of 30 students in rows 2–31 and their marks in columns B–F.

Example data:

Student Name	English	Maths	Science	Computer	Hindi	Total
Amit	80	85	78	90	75	408
Riya	90	88	92	95	85	450
Rahul	70	75	80	78	72	375

These are sample records; enter all 30 students for the practical.

Step 2: Calculate each student's total

1. Click cell G2.
2. Enter:

```
=SUM(B2:F2)
```

3. Press Enter.
4. Drag the fill handle down to G31.

The total marks for each student will be calculated automatically.

Step 3: Group students and calculate subtotals

1. Select the complete data range, including the headings.
2. Go to Data → Sort.
3. Sort by `Student Name` in ascending order.
4. Go to Data → Subtotals.
5. Under Group by, select `Student Name`.
6. Under Calculate subtotals for, select `Total`.

7. Under Use function, choose `Sum`.
8. Click OK.

Result: The spreadsheet calculates the total marks for each student and displays subtotals grouped by student name.

QUES 13 — Activity 5: Analyse Household Expenses

Aim: To calculate minimum, average, and maximum monthly household expenses for different categories.

Step 1: Enter the data

Create a spreadsheet with these headings:

A	B	C	D
Expense Category	January	February	March
Rent	12000	12000	12000
Groceries	5000	6000	5500
Utilities	2000	2500	2200
Miscellaneous	1500	1800	1200

These are illustrative values.

Step 2: Calculate minimum expenses

Add a column E named `Minimum`.

In cell E2, enter:

```
=MIN(B2:D2)
```

Drag the formula down to E5.

Step 3: Calculate average expenses

Add a column F named `Average`.

In F2, enter:

```
=AVERAGE(B2:D2)
```

Drag the formula down to F5.

Step 4: Calculate maximum expenses

Add a column G named `Maximum`.

In G2, enter:

```
=MAX(B2:D2)
```

Drag the formula down to G5.

Step 5: Expected output

Expense Category	Minimum	Average	Maximum
Rent	12000	12000	12000
Groceries	5000	5500	6000
Utilities	2000	2233.33	2500
Miscellaneous	1200	1500	1800

Result: The minimum, average, and maximum monthly expenses are calculated for all four categories.

Page 4 — Activity 6: Calculate Monthly Profit for Products X, Y and Z

Aim: To calculate monthly profit using selling prices, costs, and sales volumes.

Step 1: Enter the data

Create the following table in Calc:

Product	Selling Price	Cost per Unit	Units Sold	Revenue	Total Cost	Profit
X	500	300	100			
Y	700	450	80			
Z	900	600	60			

The prices and quantities are sample values.

Step 2: Calculate revenue

In cell E2, enter:

```
=B2*D2
```

Drag down to E4.

Step 3: Calculate total cost

In cell F2, enter:

```
=C2*D2
```

Drag down to F4.

Step 4: Calculate profit

In cell G2, enter:

```
=E2-F2
```

Drag down to G4.

Step 5: Expected output

Product	Revenue	Total Cost	Profit
X	50000	30000	20000
Y	56000	36000	20000
Z	54000	36000	18000

To calculate the total monthly profit, enter in G5:

```
=SUM(G2:G4)
```

Total profit = ₹58,000, assuming the sample values are in rupees.

Result: Monthly profit is calculated for Products X, Y, and Z by considering selling price, cost, and sales volume.

QUES 14— Activity 7: Create a Cash Withdrawal Slip Template

Aim: To create and save a reusable cash withdrawal slip template in LibreOffice Writer.

Step 1: Create a new document

1. Open LibreOffice Writer.
2. Create a blank document.
3. Type the heading CASH WITHDRAWAL SLIP.
4. Centre-align the heading and make it bold.

Step 2: Design the slip

Use the following layout:

BANK NAME

CASH WITHDRAWAL SLIP

Date: _____

Account Number: _____

Account Holder's Name: _____

Branch: _____

Amount in Figures: ₹_____

Amount in Words: _____

Signature of Account Holder: _____

Cashier's Signature: _____

Authorised Signature: _____

To create the layout neatly, use a table with borders or tab stops.

Step 3: Format the template

1. Make the heading bold and larger.
2. Add borders around the form if desired.
3. Adjust spacing so the slip fits neatly on the page.

4. Check that the labels and blank spaces are aligned.

Step 4: Save as a template

1. Click File → Templates → Save as Template.
2. Enter the name `Cash Withdrawal Slip`.
3. Choose a suitable category.
4. Click Save.

Result: A reusable cash withdrawal slip template is created and saved.

QUES 15 — Activity 8: Create a New Year Greetings Template

Aim: To create a New Year greeting template with a picture, salutations on the left, and an image on the right.

Step 1: Open a new document

1. Open LibreOffice Writer.
2. Create a blank document.
3. Type the heading HAPPY NEW YEAR!.
4. Centre-align the heading and apply a decorative font.

Step 2: Add the greeting text

Type the following on the left side:

Happy New Year!

Dear Friends,

Wishing you a year filled with happiness, success, good health, and wonderful opportunities.

May the coming year bring peace, prosperity, and beautiful memories.

Best wishes,

Your Name

Step 3: Insert a picture

1. Go to Insert → Image.
2. Select a New Year image from your computer.
3. Click Open.
4. Resize the image using the corner handles.

Step 4: Position the image on the right

1. Right-click the image.
2. Choose Wrap → Page Wrap or an appropriate wrap option.
3. Drag the image to the right side of the page.
4. Keep the greeting and salutation on the left side.

A two-column table can also be used to keep the text and image aligned.

Step 5: Save as a template

1. Click File → Templates → Save as Template.
2. Name it `New Year Greetings`.
3. Click Save.

Result: A reusable New Year greeting template is created with text on the left and a picture on the right.

QUES 16 — Activity 9: Write About Conservation of Water and Insert an Image

Aim: To write a paragraph about water conservation and insert, resize, and crop an image in LibreOffice Writer.

Step 1: Create a new document

1. Open LibreOffice Writer.
2. Create a blank document.
3. Type the heading CONSERVATION OF WATER.
4. Make it bold and centre-align it.

Step 2: Write the paragraph

You can use the following paragraph in your practical file.

Conservation of Water

Water is one of the most important natural resources on Earth. All living organisms need water to survive. However, freshwater is limited, so we must use it carefully. We can conserve water by turning off taps when they are not in use, repairing leaking pipes, collecting rainwater, and reusing water whenever possible. Farmers can use efficient irrigation methods to reduce water wastage. We should also avoid polluting rivers, lakes, and ponds. Saving water today will help ensure that future generations have enough clean water. Every individual should take responsibility for protecting this valuable resource.

Step 3: Insert a picture

1. Go to Insert → Image.
2. Choose a picture related to water conservation, such as a water droplet, a tap, or rainwater harvesting.
3. Click Open.

Step 4: Resize the image

1. Select the image.
2. Right-click and choose Properties.
3. Open the Position and Size section.
4. Set the width to `3.77` and height to `3.99`, using the measurement units shown in your Writer settings.
5. If the task requires the exact dimensions, disable Keep ratio if necessary.

6. Click OK.

Step 5: Crop the image to 50% width and 50% height

1. Select the image.
2. Open the image cropping controls.
3. Set the horizontal and vertical cropping amounts so that 50% of the original width and 50% of the original height are removed in total.
4. Apply the crop.

Important: Cropping by 50% in both dimensions is different from setting the image size to 50%. If your version provides scaling percentages rather than crop margins, follow the specific controls displayed in that version.

Step 6: Save the document

1. Click File → Save As.
2. Name the file `Conservation_of_Water`.
3. Save it in ODT format.

Result: A document containing a paragraph on water conservation and an inserted, resized, and cropped image is created.

QUES 17 — Activity 10: Create a New Paragraph Style Named “My list”

Aim: To create a custom paragraph style in LibreOffice Writer with specified font formatting.

The required formatting is:

- Font style: Bookman Old Style
- Font colour: Blue
- Text highlight colour: Red
- Font size: 18
- Text style: Bold
- Style name: `My list`

Step 1: Open LibreOffice Writer

1. Create a new document.
2. Type a sample paragraph, such as:

```
Save water, protect nature, and keep our environment clean.
```

3. Select the paragraph.

Step 2: Apply the required formatting

1. Go to Home/Format toolbar or the formatting toolbar.
2. Set the font to Bookman Old Style.
3. Set the font size to 18.
4. Click Bold.
5. Set the font colour to Blue.
6. Set the text highlight colour to Red.

If your version does not show a highlight-colour button, check Format → Character → Highlighting or use the available character background/highlighting controls.

Step 3: Open the Styles panel

1. Press F11 to open the Styles deck.
2. Select the Paragraph Styles category.
3. Right-click the selected paragraph style and choose New, or use the New Style from Selection option if available.

Step 4: Create the new style

1. Enter the style name:

```
My list
```

2. In the style settings, set the font family to Bookman Old Style.
3. Set the font size to 18.
4. Select Bold.
5. Set the font colour to Blue.
6. Set the highlight colour to Red, if supported in the paragraph or character style settings.
7. Click OK.

Step 5: Apply the style

1. Select another paragraph.
2. Open the Paragraph Styles list.
3. Select My list.

The formatting should be applied to the selected paragraph.

Step 6: Save the document

1. Click File → Save As.
2. Enter the file name `My_List_Style`.
3. Save the document.
